SPM Series Submersible Pump Monitor

ATC Diversified Electronics announces the release of the new SPM dual function submersible pump monitor alarm relay.

The SPM series now available in an eleven pin plug-in configuration is a specialized control for monitoring the shaft seal and stator temperature of a submersible pump.

Seal leakage is detected by either a resistive float switch or a pair of conductive probes installed in the seal cavity. Over temperature is detected by a normally closed low temperature switch mounted on the stator.

Specifications include 24v ac/dc and 120/240 vac control voltage models and provides dual SPDT contact output configuration with a rating of 10a @ 120 vac resistive. The SPMXXXAEA series is UL recognized.

For more information regarding the new SPM series please contact your ATC-Diversified Electronics Regional Sales Manager or call:

1-800-727-5646.
